1. *Chlorophyll a* (Chl a) is the primary photosynthetic pigment in most plants and algae. It is a green pigment that absorbs light energy in the blue and red regions of the visible spectrum. Chl a is essential for the light-dependent reactions of photosynthesis, where it converts light energy into chemical energy in the form of ATP and NADPH.

1. Physical Characteristics (name of the entity, location, size, etc.)
 2. Legal Structure (type of entity, jurisdiction, etc.)
 3. Financial Information (revenue, expenses, assets, liabilities, etc.)
 4. Operational Information (products, services, customers, etc.)
 5. Management Information (key personnel, board of directors, etc.)
 6. Compliance Information (tax returns, licenses, permits, etc.)
 7. Other Information (any other relevant information)

A hand-drawn diagram of a cell. On the left is a circle representing the cell membrane. Inside this circle is a smaller, darker circle representing the nucleus. To the right of the nucleus is an oval shape with internal folds, representing a mitochondrion. The entire diagram is drawn in black ink on a light blue background.
